Minor project report on

EFFECTIVENESS OF E RECRUITMENT IN MODERN HR

Submitted by: **Sukanya Dilip Joshi**

Enrolment no: **A9920124023203(el)**

Program: **Master of business and administration**

DECLARATION

I **Sukanya,** student of the Academic year 2024-2026 hereby declare that the Minor Project titled **Effectiveness of E-Recruitment in modern HR** which is submitted by me to **Amity University online Noida, Uttar Pradesh** in partial fulfilment of requirement for the award of the degree **"Master of Business Administration",** has not previously formed the basis for the award of the degree, diploma or other similar title or recognition.

Name of the student

Sukanya Dilip joshi

PLAGARISM REPORT

This is to certify that I, Sukanya, enrolled in the 3rd semester of the degree program "Master of Business Administration", and undertaking the course by the title "Minor Project", for the 3rd semester in the academic year 2024-2026, have submitted this report under strict compliance of the guidelines specified by Amity University by keeping the percentage of plagiarism below the permissible limits.

This plagiarism in this report has been checked using the tool "Dupli Checker" and it came out to be 100%.

Name of the student

EFFECTIVENESS OF E-RECRUITMENT IN MODERN HR

1. ABSTRACT

The rapid advancement of information technology has transformed the traditional recruitment process into a digital, technology-driven system is known as e-recruitment.

This study investigates the concept, evolution, tools, application, and effectiveness of e-recruitment in contemporary human resource management evaluates how online platforms, job portals, social media networks and AI based systems have enhanced recruitment efficiency, cost effectiveness and candidate reach.

The study revise existing literature, adopts a descriptive research methodology, and incorporates secondary data to analyse emerging trends.

The report highlights both the advantages and limitations of e-recruitment, discusses its impact on employer branding, and provides recommendations to improve digital hiring practices.

The findings suggest that e -recruitment significantly reduces hiring time, improves the quality of applicants, and offers strategic value, but also requires strong data privacy controls and digital skill readiness among HR professionals.

2. INTRODUCTION OF THE STUDY

Recruitment is one of the most critical functions of human resource management, involving the process of attracting, identifying, and hiring suitable candidates for the job roles. Traditionally, organizations relied on newspaper advertisements, employment agencies, walk-in interviews, and local networks to fill vacancies. However, the global digital revolution has reshaped these conventional systems and given rise toe-recruitment, also known as online recruitment, internet recruitment, or web-based hiring.

E-recruitment refers to the process of using the internet, online platforms, software tools, and digital technologies to identify, attract, screen, and select candidates. It includes job portals (Naukri, indeed, LinkedIn), company career websites, social media platforms, AI powered sourcing tools, recruitment management systems, and applicant tracking system (ATS).

In today's competitive environment, companies face intense pressure to recruit talent faster and at lower cost, while ensuring job candidates compatibility. Digitalization has empowered HR departments with new tools that automate manual tasks, improve candidate experience, and offer access to a global talent pool. With India's rapid digitalization, internet penetration, and business expansion, e- recruitment has become an essential component of HR strategy for small, medium, and large enterprises. This project aims to explore the concept, benefits, challenges, and future trends of e-recruitment, backed by a detailed literature review and analysis.

3. OBJECTIVES OF THE STUDY

1. To understand the concept, features, and process of e-recruitment.
2. To evaluate the impact of e-recruitment on recruitment cost, speed, and quality of hire.
3. To analyse the benefits and limitations of e-recruitment from an organizational perspectives.
4. To explore challenges faced by organizations while adopting e-recruitment tools.
5. To provide suggestions and recommendations for improving digital recruitment process.

4. SCOPE OF THE STUDY

This study focuses on the secondary research approach, utilizing existing data, case studies, and reports to analyse the recruitment trends. The scope is limited to:

a. Geographical Scope

The study largely references trends applicable to the Indian corporate sector and global best practices.

b. Functional scope:

It specifically examines the "Talent Acquisition" function of HR, excluding other HR domains like payroll on training

c. Technology Scope:

The study covers internet job boards, social media recruitment (LinkedIn), and corporate career pages

5. LITERATURE REVIEW

5.1 Introduction

The literature review serves as the backbone of this study offering an evaluation of substantive findings from existing research papers, journals, and industry reports. This chapter analyses the evolution of recruitment from traditional methods to digital platforms, focusing on the effectiveness, cost-efficiency, and challenges of E-Recruitment in the modern HR landscape.

5.2 Summarises research conducted by scholars, HR experts and industry analysts on e-recruitment

1. Emergence of E-Recruitment:

Barber (1998) states that online recruitment emerged in the late 1990s when internet usage expanded globally. Job portals began replacing newspaper ads, offering faster and wider reach.

2. E-Recruitment as a Strategic Tool:

Lievens and Harris (2003) highlight that e-recruitment is not only a sourcing technique but also a strategic HR practice that supports employer branding and workforce planning.

3. Efficiency and Cost Reduction:

Feldman and Klass (2002) found that companies adopting e-recruitment reduced recruitment cycle time by 60-70% compared to traditional methods.

Online applications also reduced paperwork, screening time and operational cost.

4. Wider Talent Pool:

Maurer and Liu (2007) showed that e-recruitment provides access to global applicants, improving diversity and quality of hire.

5. Candidate Experience:

Kashi and Zheng (2013) concluded that a well- designed career website improves candidate engagement and increases application rates.

6. Role of Artificial Intelligence:

Recent studies indicate that AI tools like Chatbots, ATS, and predictive analytics enhance resume screening accuracy and reduce hiring bias.

7. Limitations of E-Recruitment:

Several researchers highlight issues such as fake resumes, high application volume, digital divide, privacy concerns, and overdependence on algorithms.

The literature strongly supports the idea that e-recruitment has revolutionized HR practices but requires balancing technology with human intervention.

5.3 Conclusion of Literature review

The review of existing literature suggests that while E-Recruitment is undeniably superior in terms of speed and cost, it introduces new challenges regarding quality screening and candidate experience. Most studies agree that a “Hybrid Model” using technology for screening but human interaction for selection- is the most effective approach.

6. RESEARCH METHODOLOGY

6.1 Introduction

Research methodology is a systematic way to solve research problem.it serves as the blueprint for the collection, measurement, and analysis of data. Since the project focuses on the “effectiveness of e-recruitment” the methodology aims to analyse existing trends, data, and comparative studies to draw meaningful conclusions about the impact of digital hiring tools.

6.2 Research Design

The research design adopted for this study is descriptive research

It aims to accurately and systematically describe a population, situation, and phenomenon

6.3 Data Collection Method

This study relies on secondary data

Secondary data

The study utilizes information that has already been collected and analysed by other researchers, organizations and industry bodies.

The data is qualitative in nature, focusing on theories, models, and case study findings.

6.4 Sources of Data

1) Academic Journals: research paper published in reputable HR and management journals like (international journal of human resource management)

2) Books and Magazines: textbooks on Human resource management and articles from Harvard business review and people matters.

3) Industry Reports: white paper and annual reports from leading consulting firms such as Deloitte, Gartner, and KPMG regarding HR trends.

4) Case Studies: publicly available recruitment data from companies like Unilever, IBM, and Infosys

5) Digital Sources: online portals, recruitment blogs, and official statistics from job platforms like LinkedIn and Naukri.com

6.5 Tools for Data Analysis

The data is qualitative and secondary, so analytical techniques are used as

Comparative analysis: comparing the metrics (cost, time, quality) of traditional recruitment versus E-Recruitment

Content Analysis: reviewing literature to identify common themes, challenges, and success factors in digital hiring.

6.6 Limitations

This study operates under certain limitations such as

1. Reliance on secondary data: the accuracy of the findings depends on the accuracy of the original sources. There is no direct control over the data collection. No primary data collection (surveys/ interview).

2. Rapid technological changes: the field of HR technology evolves rapidly. Some data regarding specific software or platform may become outdated quickly.

3. Lack of primary insights: the study does not include real time feedback from current HR managers of job seekers, which limits the ability to capture subjective, on the ground emotions and experiences.

7. DATA ANALYSIS AND INTERPRETATION

7.1 Introduction:

This chapter presents the analysis of the secondary data collected from various industry reports and literature. The focus is to interpret the shift in recruitment paradigms by comparing traditional methods with modern electronic methods. The analysis is divided into three key areas:

Comparative analysis, cost benefit analysis, and case study interpretation

7.2 Comparative analysis: Traditional vs. E-Recruitment

parameter	**Traditional recruitment**	**E-Recruitment**	**Interpretation**
Cost	High (advertising fess, consultancy commission)	Low (subscription based,often free for social media)	E-Recruitment offers significant cost reduction, making it ideal for bulk hiring
Speed (time to hire)	Slow (weeks, months) Lead time for printing and distribution	Fast (real time) Instant posting and immediate response	Digital methods reduce the hiring cycle by 30-50%
Geographical reach	Limited (local/regional)	Global (unlimited reach)	E-Recruitment breaks geographical barriers, essential for MNCs.

Candidate quality	Lower volume, but often higher relevance (self - filtered)	High volume, but lower relevance (resume spam)	E-Recruitment requires better filtering tools (AI) to manage volume
Accessibility	Limited to business hours	24/7 accessibility	Candidates can apply anytime, increasing the applicant pool.
communication	One way (ad to candidate)	Two-way (interactive)	Social recruiting allows for engagement and employer branding

7.3 Analysis of cost effectiveness

One of the primary drivers for E-Recruitment adoption is cost efficiency. Data from industry reports indicates a stark contrast in the “Cost-per-hire” metric.

Interpretation:

Traditional advertising in national newspapers or magazines is a “sunk cost”

Recruitment agencies typically charge 8.33% to 20% of the candidate's annual CTC as a commission

Findings:

E-Recruitment platforms (Naukri and LinkedIn) operate on a flat subscription model. A single subscription allows for unlimited sourcing.

Conclusions:

For high volume hiring (e.g., entry level IT jobs), E-Recruitment is approximately 60-70% cheaper than traditional methods. however, for niche senior level roles, traditional head-hunters still provide value that algorithms cannot match.

7.4 Analysis of time efficiency (time to hire) :

"Time to hire" is the number of days between opening a job requisition and accepting an offer

Data trend

Traditional hiring cycle average 42-55 days. E-Recruitment hiring cycles average 25-30 days.

Why the difference?

1) Instant Dissemination: A job posted on a website is visible worldwide in seconds.

2) Automated screening: Applicant Tracking Systems can instantly reject candidates who do not meet minimum criteria (e.g., years of experience), saving HR managers hours of manual resume screening.

3) Faster communication: Email and automated status updates speed up the interview scheduling process.

7.5 Case Study Analysis: E-Recruitment in the Indian IT sector

To contextualize these findings, we analyse the recruitment strategy of major IT firms (like Infosys, TCS, and Wipro)

The Challenges:

These companies hire thousands of freshers annually (Mass Recruitment).

Using paper resumes or newspaper ads is logistically impossible.

The E-Recruitment Solution:

Career portals:

They utilize robust corporate career pages that links directly to their internal HR systems.

Campus Connect: virtual campus drives allow them to test and interview students from hundreds of colleges simultaneously**.**

Social branding:

They use LinkedIn to showcase company culture, attracting “passive” candidates who aren’t actively applying but are impressed by the brand.

Result: the shift to 100% digital recruitment for entry-level roles has allowed these companies to scale their workforce rapidly while maintaining a standardized selection process.

7.6 Interpretation of challenges

While the data supports the efficiency of E-Recruitment, the analysis also reveals a” quantity vs. quality Paradox.

Observation:

The ease of applying online (the One-Click Apply” button) results in HR mangers being flooded with irrelevant applications.

Interpretation:

While E-Recruitment solves these “Sourcing problem (finding people), it creates a “Screening” problem (filtering people).

This necessitates the use of Artificial Intelligence (AI) and keywords, which can sometimes unfairly reject qualified candidates who simply lack the “right keywords, in their resume.

8. RESULTS AND DISCUSSIONS

Based on the analysis of secondary data and literature in the previous chapters, the following key findings have emerged regarding the effectiveness of E-Recruitment:

1. Cost efficiency:

E-Recruitment is demonstrably more cost-effective than traditional method. Organizations can save between 40% to 60% of their recruitment budget by utilizing online job portals and social media instead of print advertisements and recruitment agencies

2. Speed of Process:

The “Time to Hire” is significantly, reduced.

Automated screening tools (ATS) and instant job posting capabilities allow organizations to close vacancies much faster- often within 25 days compared to 45+ days for traditional methods.

3. Volume vs. quality:

While E-Recruitment succeeds in generating a high volume of applications, it often struggles with quality.

The ease of applying leads to a “flood” of unqualified resumes, creating a new administrative burden for HR to screen these candidates effectively.

4. Global Reach:

E-Recruitment has successfully removed geographical barriers, allowing companies to tap into global talent pool, which is particularly beneficial for specialized to remote roles.

9. RECOMMENDATION

Based on the study, the following recommendations are proposed to enhance the Effectiveness E-Recruitment strategies:

1. Adopt a "Hybrid" approach:

Organizations should not rely solely on algorithms.

A human element is crucial. Use technology for the initial screening (sourcing), but ensure human interaction during the assessment and interview stages to judge cultural fit.

2. Optimize Job Description:

To reduce "resume spam," HR managers must write precise job descriptions with "Knock out Questions" (e.g., "Do you have 5 years of experience? Yes/No") to filter out unqualified candidates before they can apply.

3. Invest in employer branding:

Since candidates can easily research companies online, organizations must maintain a positive digital presence.

A poor rating on Glassdoor or negative reviews on social media can deter high-quality talent

4. Mobile Optimization:

With the rise of smartphone usage, recruitment portals must be mobile-friendly.

A complex application process that cannot be completed on a phone will result in a high "drop-off" rate among candidates

10. CONCLUSION

The study concludes that E-Recruitment is not just a trend but a fundamental shift in Human Resources Management. it has transformed recruitment from a reactive, paper-based administrative task into a proactive, strategic digital function.

While it offers undeniable benefits in terms of cost, speed and reach, it is not a “magic bullet.”

The most effective recruitment strategy is on that leverages technology for efficiency while maintaining the “human touch” for effectiveness.

As AI continues to evolve, thse future of recruitment lies in the synergy between smart tools and empathetic HR professionals.
